Habit Tracking App

To realise this habit tracker application , that is able to create manage and monitor habits , as well as tracking the streaks we will need two classes.

1-Habit Class:

In this class we will represent the name of the habit , the periodicity , the creation and completion dates .

2-HabitTracker Class

The use of this class will be managing and operating on the habits.

The operations will be

   *creating the habit

   *deleting the habit

   *listing all the habits

   *listing all habits by periodicity

   *getting longest streak for a specific habit

   *as well as getting the longest streak for all habits

This app will come with 5 predefined habits already integrated with the code
